BLACK

Binoculars

Compact binoculars are great for everyday general use, from travelling, to watching wildlife & sporting events. Choosing the binoculars that work for the individuals needs is vital, here are GELERT's six key points to consider:

Magnification – Can be described with two numbers separated by an x. For example, 8 x 21mm. The first number is the magnification. So they magnify up to eight times. The second number is the size of the objective lens in millimetres. The bigger the objective lens, the more light enters, so the brighter the object will appear.

Zoom – Great versatile feature to adjust the magnification to suit your needs.

Exit pupil – This is the beam of light that exits each eyepiece of the binocular & enters the eyes. The larger the exit pupil, the brighter & more superior the image will appear.

Eye relief – Refers to the furthest distance behind the binoculars eyepieces at which the whole field of view can be attained & is measured in millimetres.

Near Focus – The minimum distance to which a pair of binoculars can be focused.

Field of view – This is the widest dimension from left to right that you can see when looking through the binoculars.

VISION BINOCULAR

BINO46

Colour: Blue - Champagne - Silver
Lens: Blue

Magnification: 5 x 30mm
Weight: 140g
