

How To Guide: Securing an Awning (Outwell and Easy Camp)

A photo guide showing popular ways of securing awnings to a vehicle

1) Suction Cups

Suction cups (not supplied by Outwell) – to fix the channel pole without rain gutter or channel railing: simply clamp the channel pole in the suction cup and fix it to a dry, clean vehicle roof.

2) Rail Slide System

For vehicles already fitted with an awning rail, Outwell also offer the possibility to slide the flysheet into the rail with the same system used by caravans.

3) Railing Velcro Fixing

If your vehicle has a roof railing bar, you can use the sewn-in Velcro closures on Outwell and Easy Camp products
